DBA InfoPower Inc, Announces Load2Test Release 5

Load2Test Release 5 extends and improves Load2Test User Interface, adds support for nine additional internet protocols and advanced Data Graphing and Analysis capabilities

Santa Clara, CA. Tuesday May 19, 2009 -- DBA InfoPower an Enterprise Production Performance Management company today announced Load2Test™ Release 5. Load2Test is an integrated load testing platform for performance validation and root cause analysis of business applications

Using Load2Test our customers have improved Load Test Work Cycles by greater than 50% and reduced load tests development time by 80%. *"DBA InfoPower did an excellent job providing complex Load Stress and Performance (LSP) capabilities for integrated software suites across Hotel, BOH, Gaming and other areas. Their dedication and expertise truly make the DBAip team exceptional professionals." Richard ("Ketch") Ketchledge, SQA Manager, Largest Las Vegas Resort and Casino*

Load2Test Release 5 significantly revamps the Load2Test User Interface - from the look of the scenario text editor and to the way the real-time load test data is displayed to the user. Release 5 extends Load2Test with added support for 9 additional internet protocols.

Load2Test offers to IT management a powerful business application load testing platform that enables identification and resolution of bottlenecks, bugs and component limitations before release into production. Load2Test ensures that applications and infrastructure components perform at optimal SLA levels.

Specifically developed for backend load testing for business and production workload scalability validation, DBA InfoPower's Load2Test collects and processes essential load performance data and proactively identifies performance limiters with its integrated Root Cause Analysis system. Problems such as poorly performing SQL code and cross-tier performance degradations are highlighted and reported.
